MAY 25, 2003 (Post-Mark Date)

Dear Sir,

Regarding your request for individuals who have experienced brain implants...

In 1987 after a run in with the Clackamas County Deputy District Attorney David Paul in Oregon City Oregon... (I refused to provide states evidence in a marijuana growing operation sting.)

I received an un-welcome visitor in my room one night...

I was threatened with incarceration unless I signed a surgical release form, and I signed it, I passed out. I re-awoke (I was a little drunk) after I was stuck in the rear with a syringe. The man was a doctor and he told me a few things before I passed back out from the injection.

I briefly remember waking up as something was forced up my right sinus...(very painful)

I awoke in the morning with 5 scars on the right side of my head.

One above the right eye (inside the eyelid), one behind the right ear (I will Tell you that it hurt more than anything I had ever experienced), the back of my sinus (I viewed it with I rhino-laryngiscope), one on the middle of the right side of my throat, and a huge scar on the backside of my right shoulder.

I used to be able to hold (under the skin) a 1/2" in diameter plastic disk on the front of the right side of my throat. I opened myself up in 1999 and removed a piece of mono-filament line. And later I got a surgeon to remove the 1/2" in diameter disk! (although the doctor now denies it.)

I have tangible evidence to my claim.

I have x-rays that show foreign objects including the item that was removed, M.R.I.'s showing the items they implanted in my brain and a note from the surgeon specifying the removal of a "apparent foreign body" from my neck. I had never had any surgery except for this experience.

I am a Graduate Civil Engineer and have a good understanding of biomedical implants. I have considered getting a Masters in Biomedical Engineering just to validate my claims.

I so far have not been able to find a surgeon to disable the rest of the device although I have had several admit there is something there. Every time I try to move to get it removed they initially agree to perform the surgery and then later abruptly refuse.

I also know 5 others who received a similar procedure. The incision behind the right ear is a dead give away. (It is very painful.) Only one of them is still alive. The others died almost immediately (< 1 year) after the procedure. I expect that is why they keep it a secret. Its genocide. ☹

Any help would be greatly appreciated. I am especially interested in speaking with your attorney regarding litigation issues.
